WEST PARK (Alexanderi W'birt. x Landrail)	Pink	25. -	65.

Mature Cymbidium plants are composed of green bulbs and bulbs which have been green, but are now dormant. The bulb prices noted above are for each green bulb; dormant bulbs as part of a mature plant are priced at one-half the green bulb price. Plants offered here contain from three to fifteen bulbs each. Mature, flowering size plants are generally composed of four green bulbs or their equivalent. Each plant of a given variety, although coming from the same seed pod, develops its own Color Combinations, Shape and Vigor. These factors determine the value of every plant in a given variety and the prices indicated reflect this difference in value. When ordering these plants, please state the approximate size plant you desire. We will do our best to fill your order accordingly.
